

## Ice & Inline Skate Size Fitting Guide

Forget what your 5th grade math teacher taught you...in skate sizing 4+5 does not equal 9!!!

What does this mean? If you were to go to Mexico (where \$1 equals about 9 Pesos) would you pay \$9 for that burrito that is supposed to cost 9 Pesos? No, because a dollar is not the same value as a Pesos; you would have 1 dollar CONVERTED to 9 Pesos and use that. In this case 9 does not equal 9.

This is true for skates sizes. A men's 9 skate does not equal a men's 9 shoe. All skates (with the exception of Mission) are sized in Canadian sizes; which are equal to 1 1/2 sizes larger in U.S. shoe size (i.e. a men's U.S. shoe size of 9 is equal to a Canadian size of 7.5). A lot of our customers say "I could never fit into a 7.5 shoe!!!" This is true, however, a 7.5 skate is not a 7.5 shoe.

Please use the following guidelines to size your skates. These are guidelines only and do not constitute a guarantee of fit. Please remember that everyone's feet are different and that everyone likes their skates to fit differently.
